Box III TEXT OF THE ABSTRACT (Continuation of Item 5 of the first sheet)

The technical features mentioned in the abstract do not include a reference sign between parentheses (PCT Rule 8.1(d)).

NEW ABSTRACT

A mechanism is disclosed for facilitating the performance of communication services in a communication network. An enhanced proxy server (14) receives a signaling message and proxies the message to an application server (16). Further, the enhanced proxy server responds to the message by extracting a set of data from a data store (22) and making the set of data available for use by the application server in responding to the signaling message. Similarly, a registration server may receive a signaling message from a communicating entity (12) and may responsively make data available for use by an application server in responding to signaling messages regarding the communicating entity.
